

WILD PLANET

Butterflies are a type of insect found all over the world except for Antarctica. These invertebrates (animals without an internal skeleton) go through a four-stage life cycle: egg, caterpillar, chrysalis and butterfly. Their wings are covered in tiny scales which give them a variety of colours and patterns.

Common Jezebel
Delius nigrina

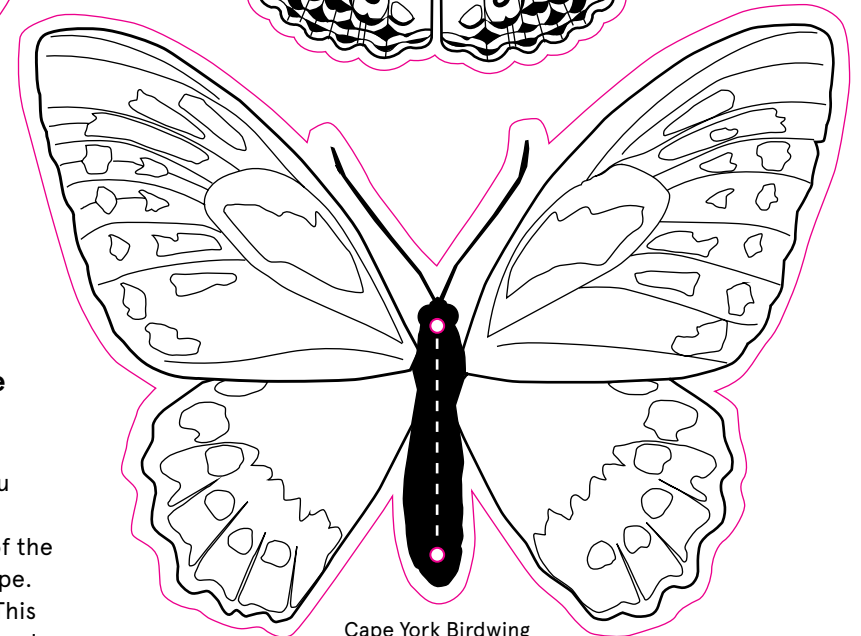

Meadow Argus
Junonia villida

Ulysses Butterfly
Papilio ulysses

Make your own butterfly envelope

1. Colour in your butterfly.
2. Cut out your butterfly.
3. Place your butterfly in an envelope. You can fold it in half if it doesn't fit.
4. Write your name, the date, the name of the butterfly, and its habitat on the envelope.
5. You can also make a butterfly mobile! This will work best if it is printed on cardboard.

Cape York Birdwing
Ornithoptera priamus
